E-TUFF® HFST
High Friction Surface Treatment Epoxy

1.01 DESCRIPTION
E-Tuff® HFST is a 1:1 ratio, 100% solids, low modulus, low viscosity, moisture tolerant, rapid setting epoxy binder and multi-purpose adhesive. Formulated as a Single or Multi-Layer High Friction Surface Treatment overlayment to produce friction “on demand” for vehicular traffic on treated asphalt and concrete substrates. Rapid cure material provides for minimal closure time. Formulated for use in bonding skid resistant materials to hardened concrete and as a binder in epoxy mortars. VOC complaint in all states and provinces in North America.

1.02 USES
Use as a neat HFST epoxy binder adhesive to bond calcined bauxite or other approved aggregates to cured asphalt or concrete pavements. Use as an above grade interior or exterior crack filler or surface sealer to prevent the intrusion of water and waterborne contaminants. All aggregates must comply with federal, state and provinces HFST specifications.

1.03 FEATURES
• Creates A Below Aggregate Protection Layer To Reduce Water And Water Borne Chemical Intrusion
• Excellent Adhesion
• Hfst Reduces Roadway Departure And Saves Lives
• Mix Ratio 1:1 By Volume For Ease Of Use
• Self-Priming
• Use Neat Resin And Hardener Or Aggregate Extended Mortar For Patching And Concrete Repair
• Use Neat Resin And Hardener To Mend Cracks, Broadcast Aggregate

1.04 TECHNICAL DATA
Meets: ASTM C881, Type III, Grade 1, Class B & C and AASHTO M 235, Type I, Grade 1, Class B & C

1.05 COLOR
Clear to Light Amber

1.06 PACKAGING
10-gallon kit: 5 gallon pail of Side-A (18.9 liters) and 5 gallon pail of Side B (18.9 liters)
100-gallon kit: 50 gallon drum of Side-A (189 liters) and 50 gallon tote of Side B (189 liters)
500-gallon kit: 250 gallon tote of Side-A (946 liters) and 250 gallon tote of Side B (946 liters)

1.07 COVERAGE
Automated Application Vehicle: Apply the binder resin at a rate of 3-4 gallons (11-15 liters) per 100 sqft (9.3 sqm) or 25-35 sqft per gallon (2.30 sqm). Provide a uniform thickness of 50 to 65 mils (1270 to 1574 microns).

Apply the calcined bauxite aggregate within 3 +/- seconds of the placement of the epoxy binder on to the pavement. Automated application rate: 1500-2000 sqyd (1254-1627 sqm) per hour.

For non-automated application, use E-Tuff® HFST (LPL) which has a longer working time.

1.08 ESTIMATED COVERAGE
Single and Multi-Layer Coverage:
Course #1: Epoxy rate: 40 sqft/gallon (1 liter/sqm) Aggregate rate: 1-1.5 lb/sqft (4.88-7.32 kg/sqm).
Course #2: Epoxy rate: 20 sqft/gallon (2 liter/sqm) Aggregate rate: 1-1.5 lb/sqft (4.88-7.32 kg/sqm).

Epoxy Mortar Coverage:
Epoxy Mortar: 2 gallon (7.6 liter) epoxy mixed with 10 gallon (37.8 liters) of washed, dried and bagged sand yields approximately 1.2 cuft.

1.09 SURFACE PREPARATION:
The concrete and asphalt must be a minimum of 30 days old, sound and free of all contaminates, including oil, grease, dust, laitance and other bond breaking materials. Mechanically abrade the concrete surface by grinding, abrasive blasting or shot blasting to an ICRI Guideline No. 310.2R, CSP 3 – 5.

Concrete moisture levels are recommended less than 5%, per ASTM F2659 Standard Guide for Preliminary Evaluation of Comparative Moisture Condition of Concrete, Gypsum Cement and Other Floor Slabs and Screeds Using a Non-Destructive Electronic Moisture Meter, such as TARMEX CME4 or TARMEX CMEX II, or similar devises.

No standing water.

1.10 MIXING
Condition material for hand mixing to 65°F to 85°F (18°C to 29°C) for ease of mixing and optimum flow when using. Condition material for automated mixing per the manufacturer’s recommendation or 75°F (23.9°C).

Mechanical plural component mixing and dispensing equipment: Check to make sure that volume is dispensed at the correct ratio and that the material is thoroughly mixed, before putting the equipment into service. Follow the manufacturer’s recommendations.

Hand Mixing: Premix each side for thirty seconds, then place 1 part by volume Side-A and 1 part by volume Side-B into a clean pail and mix for three minutes at a low speed using a PSI Rapid Pail Mixer or a ½ hp
heavy duty drill with a Jiffy type paddle utilizing the PSI 1 Man Stand. Mix only what can be used within its pot life.

APPLICATION

2.01 AUTOMATED APPLICATION
Surface and ambient temperature must be a minimum of 50°F (10°C). Utilize one of the following methods for the application of E-Tuff® HFST and aggregate wearing coarse.

2.02 MECHANICAL MIXING and APPLICATION
E-Tuff® HFST can be applied by a truck mounted dispensing equipment onto the pavement section to be treated in varying widths at a uniform thickness. Operations shall proceed in such a manner that will not allow the material to separate in the mixing lines, cure, dry, or otherwise impair retention bonding of the high friction surfacing aggregate. The mixed sides shall be applied mechanically onto the prepared pavement surface at a minimum rate of 3-4 gallons per 100 sqft (1.21-1.63 liter/sqm) or 25-32 sqft/gallon for a one coat system. Immediately broadcast the high friction surface aggregate onto the epoxy binder at a minimum rate of 1-1 ½ lbs/sqft (0.45-0.68 kg/sqft).

2.03 HAND MIXING and APPLICATION
The E-Tuff® HFST Side-A and Side-B, shall be premixed and proportioned to the correct ratio, 1:1. Mix material using a low speed, high torque drill fitted with a Jiffy type paddle mixer or a helical paddle. This method shall be used where truck mounted application equipment is not available because of logistics or restrictions. The mixed sides shall be hand applied onto the prepared pavement surface at a coverage rate of 2 ½ gallons per 100 sqft (1 liter/sqm) or 40 sqft/gallon. Hand applied binder shall be uniformly spread onto the substrate surface by means of a 3/16” (4.8 mm) notched squeegee. Immediately, spread the high friction surfacing aggregate onto the epoxy at a minimum rate of 10 lbs/sqyd. If required by specification, after the initial cure of the first course, remove the excess aggregate and apply coarse #2, spreading the neat E-Tuff® HFST at a coverage rate of 5 gallon per 100 sqft (2.0 liter/sqm.) or 20 sqft/gallon and broadcast aggregate to rejection. After allowing the system to cure – 2.5 hours for coarse #1 and 4 hours for coarse #2 at 70°F (22°C) and after all the excessive aggregate has been removed, open to traffic.

2.04 CURING
Cold Temperature Formula Available Upon Request.

It is highly recommended that all sides be conditioned in advance of use to 75°F (26.8°C). This may take 48 hours. It is to the contractor’s benefit to maintain the sides at elevated temperatures. Lower temperatures increase the binder’s viscosity and increase curing time.

2.05 CLEAN UP
Clean tools before the epoxy binder sets up using acetone or PSI’s EnviroClean™.

2.06 STORAGE AND SELF LIFE
The material should be stored between 40°F to 95°F (5°C to 35°C), in a dry and out of direct sunlight. The shelf life of properly stored and unopen containers is 24 months. Excessive temperature differential and/or high humidity can shorten the self-life.

2.07 LIMITATIONS
- Minimum substrate temperature is 50°F (10°C)
- Maximum substrate temperature is 150°F (65.6°C) for automated applications. Mechanical and hand apply will be at a lower temperature.
- Do not thin with solvent. Solvent will prevent proper cure.
- Do not use wet aggregate. Aggregate must be clean, dry and bagged.
- Do not place on magnesium phosphate cement concrete.

2.08 SAFETY
- Eyes: Hold eyelids apart and flush thoroughly with water for 15 minutes.
- Skin: Remove contaminated clothing. Wash skin thoroughly for 15 minutes with soap and water.
- Inhalation: Remove person to fresh air.
- Ingestion: Do not induce vomiting. In all cases, contact a physician immediately if symptoms persist.
- SDS: Obtain, read and understand the Safety Data Sheet before use of this or any other Poly-Tuff System International products.

2.09 CAUTION
- Side A – Irritant
- Side B – Corrosive
- Product is a strong sensitizer
- Use with adequate ventilation
- Wear protective clothing, gloves and appropriate eye protection (safety glasses, googles or face shield).
- Do not take internally

READ SDS PRIOR TO USING PRODUCT. FOR PROFESSIONAL USE ONLY. KEEP OUT OF REACH OF CHILDREN. MADE IN THE USA.
