P-TUFF® U75
Fast Curing, 100% Solids, Flexible, Aliphatic, Seamless, Two Component Spray Polyurea Coating System

1.01 DESCRIPTION
P-Tuff® U75 is a fast set, rapid curing, 100% solids, flexible, aliphatic, two component, spray polyurea that can be applied to suitably prepared interior or exterior concrete and metal surfaces. Its extremely fast gel time makes it suitable for applications down to -20°F (-29°C). It may be applied in single or multiple applications without appreciable sagging and it is relatively tolerant to moisture and temperature variances, allowing application in most temperatures. Please use the correct product grade that complies with VOC regulations as per federal, state, county and city regulations/codes at the place of installation of product.

1.02 FEATURES
- Coats Carbon or Mild Steel Metals Without Primer
- Elastomeric
- Good Chemical Resistance
- Installed With or Without Reinforcement in Transitional Areas
- Meets USDA Criteria
- Non-Reactive
- Seamless
- Excellent Color Retention
- Low Temperature Flexibility
- No Toxic Vapors
- Odorless
- Zero VOC (100% Solids)
- Coats Carbon or Mild Steel Metals Without Primer
- Elastic
- Good Chemical Resistance
- Installed With or Without Reinforcement in Transitional Areas
- Meets USDA Criteria
- Non-Reactive
- Seamless
- Excellent Color Retention
- Low Temperature Flexibility
- No Toxic Vapors
- Odorless
- Zero VOC (100% Solids)

1.03 USES
- Airports
- Fertilizer Plants
- Industrial Facilities
- Manufacturing Facilities
- Mining Operations
- Parking Garage Decks
- Refineries
- Structural Steel
- Warehouse Floors
- Water & Waste Water Treatment

1.04 COLOR
Various colors are available upon request. Minimum quantity REQUIRED

1.05 PACKAGING
10-gallon kit: 5 gallon (18.9 liters) pail of Side-A and 5-gallon (18.9 liters) pail of Side-B.
100-gallon kit: 50 gallon (189 liters) drum of Side-A and 50-gallon (189 liters) drum of Side-B.

1.06 COVERAGE
P-Tuff® U75 may be applied at any rate to achieve desired thickness. Theoretical coverage for 1 mil thickness is one gallon per 1600 sqft (25.4 microns is 3.78 liters/149 sqm).

1.07 SURFACE PREPARATION
In general, coating performance and adhesion are directly proportional

(*These physical properties from sample sprayed with Graco Foam Cat 200 @ 2000 psi minimum, with Gusmex GX7-400 mechanical purge gun @ 150-160°F. Different machine and parameter will change these properties. User should perform their own independent testing as properties are approximate.)
to surface preparation. Most failures in the performance of surface coatings can be attributed to poor surface preparation. Polyurea coatings rely on the structural strength of the substrate to which they are applied. All surfaces must be free of dust, dirt, oil, grease, rust, corrosion and other contaminants. When coating substrates previously used, it is important to consider the possibility of substrate absorption, which may affect the adhesion of the coating system, regardless of the surface preparation. PSI recognizes the potential for unique substrates from one project to another. The following information is for general reference, and for project-specific questions, contact a PSI representative.

New and Old Concrete:
Refer to SSPC-SP13/NACE 6, or ICRI 03732: CSP 3-5. New concrete must be cured for 28 days prior to product application. Surface must be clean, dry, sound and offer sufficient profile for product adhesion. Remove all dust, dirt, oil, form release agents, curing compounds, salts, efflorescence, laitance and other foreign matter by shotblasting and/or suitable chemical means, in accordance with local chemical regulations. Rinse thoroughly, to achieve a pH between 8.0 and 11.0. Allow to dry completely. If old concrete has a surface that has deteriorated to an unacceptably rough surface, P-Tuff® U75 or a mixture of Enviro-Grip™ #1 and sand should be used as a repair agent for cracks, spalls, bug holes and voids. Upon full cure of the repair agent, prime the entire surface intended for coating. Concrete Surface Preparation Reference:
ASTM D4258 – Standard practice for cleaning concrete
ASTM D4259 – Standard practice for abrading concrete
ASTM D4260 – Standard practice for etching concrete
ASTM F1869 – Standard test method for measuring moisture vapor emission rate of concrete
ICRI 03732 – Concrete surface preparation

Wood:
All wood should be clean, dry and free of any knots, splinters, oil, grease or other contaminants. Splintered or rough areas should be sanded. Knots should be repaired using P-Tuff® U75 with sand. Upon full cure of the repair agent, prime the entire surface intended for coating.

Steel (Atmospheric and Immersion Exposure):
Remove all oil, grease, weld spatters and round off any sharp edges from surface. Minimum surface preparation is Near White Metal Blast Cleaning per SSPC-SP10/NACE 2. Optimum surface profile is 2-3 mils. Prime and shoot P-Tuff® U75 on to any bare metal the same day as it is cleaned to minimize any potential flash rusting.

Rough and pinholed concrete surfaces may require more primer. Discovery of these issues is generally revealed in the mockup. See the Tech-Note Section of the Poly-Tuff website. Do not allow primer to puddle, dry roll excess primer with a dry nap roller to pick up excess primer in puddles and overlaps.

Refer to General & Safety Guidelines for complete information.

1.08 PRIMING
Prime surface as required with Enviro-Grip™ EP#2(SC), #1 or PUR#555 at a rate of 1 gallon/300 sqft or 300 sqft/gallon (0.14 liters/sqm). Apply using a brush or phenolic core roller. This will result in 3 dry mils (76 microns) of coating. Existing urethane coated surfaces should be primed with Enviro-Grip™ PUR#555.

Rough and pinholed concrete surfaces may require more primer. Discovery of these issues is generally revealed in the mockup. See the Tech-Note Section of the Poly-Tuff website. Do not allow primer to puddle, dry roll excess primer with a dry nap roller to pick up excess primer in puddles and overlaps.

1.09 MIXING
P-Tuff® U75 may not be diluted under any circumstances. Use appropriate solvent for solvent purge line and flushing of equipment and if spraying stops for periods exceeding the pot life of the material. Thoroughly mix P-Tuff® U75 Side-B Base material with air driven power equipment until a homogeneous mixture and color is attained.

1.10 JOINTS, CRACKS, AND FLASHING
Apply P-Tuff® U75 over all primed joints and cracks. Bridge the joints and cracks with 4" (10.16 cm) Super Seal Polyester Tape. Do not prime over Super Seal Tape. Over reinforcement tape apply a thin coat of P-Tuff® U75 and smooth onto adjacent surface. Optionally in lieu of 3 coursing laps and joints, Super Seal Tape may be used over all cleaned laps, joints and cracks and then coated. Fully reinforced systems do not require the use of Super Seal Tape over joints and cracks.

Wall to deck perimeter flashings shall be either a minimum of 24 gauge galvanize steel flashing or 40-60 mil EPDM Sheet Rubber. Flashing shall turn up the wall a minimum of 6" (15.24 cm) and turn out 4" (10.16 cm) onto the deck surface. Metal Flashings require Enviro-Grip™ EP#2. EPDM must be primed with Enviro-Grip™ #1, #2, or PUR#555. The use of Flexi-Flash™ may often replace corrosive metal flashings.

APPLICATION
2.01 APPLICATION BASICS
P-Tuff® U75 should be applied using a 1:1 plural component equipment capable of developing a minimum of 2000 psi and heating the individual component to 170°F (77°C) using an impingement gun. Hose temperature should be maintained at 160-170°F (71-77°C). The P-Tuff® U75 material should be preheated to 75-85°F (24-30°C).

P-Tuff® U75 should be sprayed in multi directional passes for a proper uniform thickness.

2.02 EQUIPMENT CLEANUP
Equipment should be cleaned immediately after use with an environmentally safe, urethane-grade solvent (alcohol free) as permitted under local regulations.

2.03 SHELF LIFE AND STORAGE
P-Tuff® U75 has a shelf life of 12 months from date of manufacture in original, factory-sealed containers when stored indoors at a temperature between 60-95°F (15-35°C).

Avoid freezing temperatures. Store drums on wooden pallets to avoid direct contact with the ground. If stored for a long period of time,
rotate Side-A and Side-B drums regularly.

2.04 - LIMITATIONS
- Surfaces must be dry, clean and free of foreign matter.
- Containers that have been opened must be used as soon as possible.
- Do not open until ready to use.
- Side-A and Side-B containers should be fitted with a desiccant cartridge on the pail so that only dry air is sucked in a pail while withdrawing product.

This product is considered Dangerous Goods.

DOT regulations classify it as Side-A: UN 2810, TOXIC LIQUID, organic, N.O.S (Isophorone Di-isocyanate), Class 6.1, PG III, TOXIC Side-B: UN 2735, AMINES, liquid corrosive, N.O.S (polyoxypropylenediamine), Class 8, PG III, CORROSIVE

WARNING: THIS PRODUCT CONTAINS ISOCYANATES AND CURATIVES.
