## PSI Tech-Note

10/2/2006

### **Plywood Joint Preparation for Non-Metal Lath Walking Decks**

- Caulk all plywood joint junctures with single or two component urethane and allow to dry. P-Tuff Flex, P-Tuff 100 or P-Tuff Classic may be used with Thixo to seal joints if preferred for fast curing.
- Press sealant or coating into the joint by using a margin trowel.
- Apply a thin coat, approximately 20 mils thickness over the sealant.
- Press 3-4" wide polyester or yellow jacket tape into the wet sealant or coating.
- Apply base coat as specified in related Flexideck System Data Sheet

The systems are outlined in the Flexideck Systems in the Poly-Tuff Binder or at [www.polytuffus.com](http://www.polytuffus.com). Consult the related data sheet or call 866.977.8833 for further information.
